Access to APS Journals Online requires no formal license agreement. Simply complete a Price Quote Form and adhere to these "Terms of Use" upon activation of your institution's paid subscription. Electronic Subscriptions to the journals of The American Phytopathological Society (APS) are available to academic libraries, corporate libraries, and other institutions. Electronic institutional subscriptions include the following benefits:

- Unlimited access through IP authentication—permission to freely distribute the content of the subscribed electronic journal(s) to all employees, faculty, students, and/or local patrons of the subscribing institution who are located at the APS approved site(s) as identified by the subscribing institution and whose computers are within the I.P. addresses at those APS approved sites designated at the time the subscription is granted.
- Access to paid content published within the past 12 months for *Molecular Plant-Microbe Interactions* and 24 months for *Phytopathology* and *Plant Disease*
- Access to articles published online before print
- Access to available content published since January 1st 1979
- Inter-Library Loan from the electronic copy is permitted if printed from the electronic copy and delivered as paper print-out - not supplied via electronic copy
- COUNTER-compliant usage data is available
- Citation Management for Library Patrons

This copyright statement is affixed to all APS journals. Permission to distribute according to these terms of use applies to current paid electronic subscribers.

Permission to Distribute for Institutional Electronic Subscribers.

Permission is hereby granted to freely distribute the content of the APS journal(s) to the employees, faculty, students, and /or local patrons of the subscribing institution via I.P. access during the subscription year. The employees, faculty, students, and/or local patrons must be located within the location(s) and I.P. address ranges as identified by the subscribing institution to APS.

**The American Phytopathological Society**  
**TERMS of USE and FAQs**

The questions and answers below have been compiled to further explain APS's position on its institutional electronic subscriptions.

**Q: How do the employees or students at an institution gain access to the APS electronic journals on a daily basis?**

A: Via I.P. address recognition, so that patrons do not need to login to the APS Journals Online. Access is quick, easy, and seamless.

**Q: What if the institution has more than one campus or location?**

A: APS asks each institution to identify the campuses and locations served by the I.P. ranges it provides access to when first subscribing.

**Q: How is the annual subscription price of an institution's online access determined?**

A: APS uses a number of factors to determine the price of the Society's electronic journals including the size of the institution, the quantity of APS journals subscribed by the institution and its patrons, and the number of faculty, students, and/or employees at the institution who are identified as potential users. APS is a nonprofit society publisher and it is the Society's goal to make the APS journals widely available online to as many potential users as possible at a reasonable price. The APS governing council, which is comprised of scientists from universities and agricultural companies worldwide, wants to maintain the financial integrity of the journals while achieving a broad distribution of the scientific research.

**Q: Will my institution have access to all three online journals from APS?**

A: Only if the institution requests pricing on all three journals. APS does not require that the institution subscribe to all three, but it is somewhat less expensive per journal to do so.

**Q: May employees, faculty, and students gain access to APS journals when they travel to other locations or from their homes, dorm rooms, etc. by remote personal login to their institution's internal network?**

A: Yes, but only if they work, teach, or attend the institution in the location(s) served by the I.P. ranges where the electronic access is subscribed. Experiment station employees and employees at other satellite facilities that are not physically on the same campus must be identified by the institution at the time the institution subscribes to be included as qualified users, even if the users of the subscribing institution share time at both sites.

**Q: What happens if an institution subsequently drops its electronic subscription?**

A: The institution would continue to have access to more than 50 years of Open Access online content, but loses access to the protected paid content.

**Q: Are institutional users permitted to make copies of APS materials for distribution outside the institution's own employees, faculty, students, and/or local library patrons where the journal is subscribed?**

A: No

**Q: What about interlibrary loan?**

A: Subscribing institutions may supply interlibrary loan to the extent that they do normally with a print journal. Rather than supplying electronic files, the loaning institution may only supply printouts.

**Q: Will licenses or signed agreements be required in the future?**

A: APS reserves the right to require licenses or signed agreements in the future.

**Q: Why did APS take this unprecedented approach of providing electronic access without a signed agreement?**

A: APS believes scholarly materials should be available within institutions with as little restriction as possible; provided its journals maintain their financial integrity. APS also believes that authors, readers, institutions, and journals within the scholarly community have a common purpose. Because of this, APS hopes all members of the community will act appropriately to ensure the ongoing simplicity of this system of access.
