U.S. Department of Agriculture

Homeland Security Presidential Directives (HSPD) 9 & 10

USDA Status Update and Planning for Key Activities

Report Submitted to the White House Homeland Security Council
January 2007

National Plant Disease Recovery System (NPDRS) capable of responding to a high consequence plant disease with pest control measures and the use of resistant seed varieties within a single growing season to sustain a reasonable level of production for economically important crops. The NPDRS will utilize the genetic resources contained in the U.S. National Plant Germplasm System as well as the scientific capabilities of the Federal-State-industry agricultural research and extension system. The NPDRS shall include emergency planning for the use of resistant seed varieties and pesticide control measures to prevent, slow, or stop the spread of a high-consequence plant disease, such as wheat smut or soybean rust.
