

- Electronic survey of all Pacific Division members conducted from 9/16/15 to 10/9/15
- 121 people responded; 18% response rate.
- Respondents rated networking opportunities as the most important factor for creating a positive meeting experience. Opportunities for graduate students and the scientific program (special sessions) were rated the second and third most important factors.
- These factors were especially important for members that attend most regularly.
- Overall, and across all attendance levels, respondents indicated they were more likely to participate in a field tour than a statistical workshop or professional development activities.
- Between the two workshop offerings, there was a slight preference for a workshop on experiment design/power analysis vs. an introduction to R.
- The majority of respondents (74%) favored the current practice of holding a joint meeting when the APS annual meeting is held in the Pacific Division. Further, at least 50% of respondents in all attendance groups except "N/A" also supported this structure.
- There was strong support (92%) for raising annual membership dues. Again, at least 50% of respondents in all attendance groups supported raising dues.
- The plurality of respondents (29%) expressed interest in hosting the next meeting in California. A venue in Oregon was second (16.5% of respondents). Washington was third (8.3%).

Question 4. Please rate the importance of the following for creating a positive experience at a Pacific Division meeting?

Question 5. The planning team for the 2016 meeting is considering several options for field tours and workshops. How likely are you to participate in the following events if offered the day before the meeting begins?

Attendance group	Continue to Meet with Annual	Raise Dues
Never	61%	63%
Rarely	76%	74%
Sometimes	56%	89%
Regularly	55%	82%
Nearly always	50%	50%
N/A	17%	100%
All members	74%	92%

Question 7 and 8. Percent of respondents with positive responses.
