The Honorable George W. Bush  
President of the United States  
The White House  
1600 Pennsylvania Avenue, NW  
Washington, DC 20500  

May 5, 2006  

Dear Mr. President,  

On behalf of a wide business, academic and scientific community, thank you very much for your strong leadership regarding the American Competitiveness Initiative. We have listened carefully over the past several weeks as you have spoken around the country in support of the Initiative. We encourage you to continue working with Congressional leaders to secure full funding for the ACI basic research targets and the ACI math and science education programs. We pledge our support to achieving these major national priorities.

In a world where our ability to innovate increasingly determines our competitiveness, we agree that we must invest in the discovery science, engineering and education that provides the foundation for high-growth jobs and industries. In particular, your budget requests for the National Science Foundation, the Department of Energy Office of Science, the National Institute of Standards and Technology and the math/science education programs in the ACI put us on the right path.

We are concerned that House leaders have not yet demonstrated that ACI basic research investment is a top economic priority. The House Budget Committee, for example, proposed a resolution with $300 million less for General Science, Space and Technology than the Administration’s FY2007 request. If appropriators followed such guidance it would be very difficult to increase basic research in the physical sciences and engineering in a meaningful way. This guidance would effectively preclude the doubling of basic research over the next ten years as you have proposed.

Thank you again for supporting critically needed investment in basic research and math/science education in the American Competitiveness Initiative. We are committed to helping in any way to achieve this goal.

Sincerely,

THE INNOVATION AND COMPETITIVENESS COALITION
