

## Erratum

Vol. 86, No. 7, 1996

In a Letter to the Editor by Francis J. Ferrandino (Phytopathology 86:685-691) entitled "Two-Dimensional Distance Class Analysis of Disease-Incidence Data: Problems and Possible Solutions," the two infected plants that were originally located in the first two columns of row 9 should be located in row 6. The correct version of Figure 2 is shown below.

**Fig. 2.** Hypothetical data set on an  $8 \times 12$ -rectangular lattice, first introduced by Gray et al. (14). Infected plants are denoted by filled symbols, healthy plants as open circles.
