A lycopene and carotenoid rich mutant tomato line, introgressed into commercial cultivars, produces less strigolactone making tomato less susceptible to Orobanche report J. A. López-Ráez and associates at Wageningen University, RIKILT, Netherlands, and The Volcani Center, Israel. (J. Agric. Food Chem. 56:6326-6332, 2008)

Nitrogen application can reduce need for fungicide application to control Cercospora leaf spot and Alternaria leaf blight of carrot report S. M. Westerveld and associates at the University of Guelph, Canada. (HortScience 43:1522-1527, 2008)

Turnip yellow mosaic virus was found for the first time on Chinese cabbage and in Japan and is seed-transmitted report N. Kirino and associates at Okayama Prefectural Center and Osaka Prefecture University, Japan. (J. Gen. Plant Pathol. 74:331-334, 2008)

The type VI secretion system of Pectobacterium atrosepticum is needed for secretion of haemolysin coregulated proteins but not for virulence on potato report L. Mattinen and associates at the University of Helsinki, University of Turku, and Åbo Akademi University, Finland. (Microbiology 154:2387-2396, 2008)

Nearly 25% of samples of oak powdery mildew in Europe showed 100% homology with Erysiphe quercicola from Quercus spp. in Asia report A. Mougou and associates at INRA, UMR1202 BIOGECO, France. (For. Pathol. 38:275-287, 2008)

Virulence effectors of Pseudomonas syringae block signal transmission by a multiple MAMP-receptor complex component report L. Shan and associates at Harvard Medical School, University of Michigan, University of Missouri, Ebergard-Karis-Universität, Germany, Boyce Thompson Institute, and Cornell University. (Cell Host Microbe 4:17-27, 2008)

Sugar beet can be bred for resistance to Beet yellows virus using molecular marker technology report M. K. Grimmer and associates at Broom’s Barn Research Centre, Bury St. Edmunds, UK. The locus is on chromosome IV. (Plant Breed. 127:391-397, 2008)

The glycosylphosphatidylinositol anchor biosynthetic pathway is required for morphogenesis, cell wall integrity, and pathogenicity in Leptosphaeria maculans on oilseed rape report E. Remy and associates at INRA, France; Universität Tübingen, Germany; DBEA, Mexico. (New Phytol. 179:1105-1126, 2008)

A crystal structure of the Agrobacterium tumefaciens virulence complex VirE1-VirE2 identifies a protein that can accommodate different binding partners report O. Dym and associates at the Weizmann Institute of Science, Israel, and Max Planck Institute, Germany. (Proc. Nat. Acad. Sci. USA 105:11170-11175, 2008)

Tobacco etch virus affects stress-response pathways in arabidopsis such as systemic acquired resistance and hypersensitivity (1727 genes in expression analysis) report P. Agudelo-Romero and associates at Consejo Superior de Investigaciones Científica-UPV, Spain, and École Polytechnique, France. (Virol. J. 5:92, 2008)
